REMARKS

- 25X1 1. Between 8 and 15 May 1953, [] the hangars in the northern section of Rangsdorf airfield were fully occupied by twin-engine transport planes. These planes repeatedly circled the field. Between the large repair hangar and the southern hangar in the eastern section of the field there were two engine test stands on which engines were being tested mostly in the afternoon.
- 25X1 2. Between 5:30 p.m. and 6 p.m. on 15 May, a twin-engine DC-3 plane [] was parked in front of the hangars near which 5 biplanes [] were also observed. There was no air activity.
- 25X1 [] Comment. The buildings at Rangsdorf airfield house a repair shop for piston engines. The transport planes observed at the field probably were repaired planes which made test flights at the field.
